

# How To Edit Photos On iPhone Using The Built-In Photos App

## 2. Duplicate Your Photo to Preserve The Original (Optional)

To duplicate an image, open it in the **Photos** app and tap the \_\_\_\_\_ icon at the bottom left. Then scroll down and tap **Duplicate**.

Tap the **Back** arrow at the top left to return to your photo library.

The duplicate image will appear at the bottom of your photo library. You can edit this image while the original remains \_\_\_\_\_.

## 3. Open the iPhone Photo Editor in The Photos App

Just open the photo you want to edit, then tap \_\_\_\_\_ at the top right of the screen.

In the iPhone photo editor, there are \_\_\_\_\_ icons at the bottom of the screen.

### 4.2 Exposure

The **Exposure** tool brightens or darkens your photo.

The Exposure tool has more effect on the \_\_\_\_\_ than the shadows. This means that the bright tones in your photo are affected more than the dark tones.

### 4.3 Brilliance

The **Brilliance** tool is great for bringing out details and making your photo look richer and more \_\_\_\_\_.

### 4.4 Highlights

The **Highlights** tool adjusts the brightness of only the \_\_\_\_\_ areas in your photo.

## 4.5 Shadows

The **Shadows** tool adjusts the brightness of only the \_\_\_\_\_ areas in your photo.

## 4.6 Contrast

The **Contrast** tool adjusts the contrast between the dark and bright \_\_\_\_\_ in your photo. Drag the slider right to increase contrast, making the shadows darker and the highlights brighter. Or drag left to reduce contrast, making the shadows and highlights more \_\_\_\_\_ in tone.

## 4.7 Brightness

The **Brightness** tool brightens or darkens your photo. But it does it in a slightly different (and usually better) way from the \_\_\_\_\_ tool.

The Brightness tool has more effect on the shadows and \_\_\_\_\_. This means the dark and medium tones get adjusted more than the bright tones.

## 4.9 Saturation

The **Saturation** tool makes the colors more vibrant or less vibrant. In most cases, increasing the saturation a little bit will make your image “pop.” But be careful not to over-saturate the colors. If you make the colors too vibrant, they won’t look \_\_\_\_\_. To create a **black and white** photo, set the **Saturation** to \_\_\_\_\_.

## 4.10 Vibrance

The **Vibrance** tool makes muted colors more vibrant without affecting \_\_\_\_\_ tones or saturated colors too much. The **Vibrance** tool usually produces more natural-looking colors than the \_\_\_\_\_ tool. This is because it doesn’t over-saturate skin tones or colors that are already vibrant.

#### 4.11 Warmth

The **Warmth** tool makes the colors in your photo warmer or \_\_\_\_\_.

You can use the **Warmth** tool to correct the color balance of a photo. Or use it to change the overall \_\_\_\_\_ of an image.

#### 4.14 Definition

The **Definition** tool adjusts contrast to improve the clarity of \_\_\_\_\_ in your photo.

#### 4.16 Vignette

The **Vignette** tool darkens or brightens the \_\_\_\_\_ of your photo.

### 6. Crop, Rotate, Straighten & Adjust Perspective

To access these tools, tap the \_\_\_\_\_ icon at the bottom of the screen.

#### 6.2 Straighten

If your photo doesn't look \_\_\_\_\_, you can easily straighten it in the Photos app.

Tap the **Straighten** tool beneath the image. Then drag the slider to rotate and straighten the photo. Use the \_\_\_\_\_ to help you get the photo perfectly level.

#### 6.5 Crop

The Crop tool lets you remove the \_\_\_\_\_ of your image.

Cropping your photo is great for getting rid of \_\_\_\_\_ elements from the edges of the frame. This results in a cleaner, simpler image with a stronger visual impact. You may also wish to crop your image to improve its \_\_\_\_\_. For example, cropping can help you create better symmetry or apply the rule of thirds after taking your photo.

Cropping also allows you to zoom in on a distant subject. But be careful not to crop too much of the photo as this can result in a small, \_\_\_\_\_ image.

If you want to crop to a specific aspect ratio, tap the \_\_\_\_\_ icon at the top right.

## 7. Save Your Edited Photo

When you've finished editing your photo, tap \_\_\_\_\_ to save the changes. If you'd prefer not to save your edits, tap \_\_\_\_\_ (instead of **Done**) in the photo editor. Then tap \_\_\_\_\_.
